

Project Proposal

Garage Management System

Prepared for Twinspark Tyres And Bike Garage, Coimbatore

1. Introduction

Twinspark Tyres And Bike Garage is a premium motorcycle tyre retailer and professional service centre located in Coimbatore, serving performance and sports motorcycles such as Yamaha, KTM, BMW and Kawasaki. Alongside track tyres and brand-new tyres, the business sells engine oil, chains, sprocket kits, brake parts, lubricants, accessories and other spare parts, and runs a full-service motorcycle garage.

This proposal outlines a web-based Garage Management System designed to digitize and unify Twinspark's inventory, purchase, sales, service and billing operations, replacing the current manual record-keeping with a single, centralized platform.

2. Business Problem

Inventory, sales and service records are currently maintained manually, making it difficult to track stock accuracy, monitor purchase and sales performance, and get a real-time view of business health. Twinspark needs a centralized system to manage inventory, purchases, sales, garage services, invoicing, profit tracking, online tyre orders and business reporting.

3. Project Objective

The objective is to develop a single web application that helps Twinspark manage Inventory, Purchases, Sales, Service Jobs, Billing, Customers, Online Orders and Reports — reducing manual work while improving inventory accuracy and overall business visibility.

4. Scope of Work — System Modules

The system will be delivered with the following core modules:

Module	Description
Dashboard	At-a-glance view of stock, sales, purchases, revenue, profit and low-stock alerts.
Inventory Management	Central catalogue of track tyres, brand-new tyres, oils, chains, sprockets, brake parts and accessories with purchase & selling price tracking.
Purchase Management	Records purchase entries and automatically updates stock levels.
Sales Management	Point-of-sale style billing for tyres and other products, with optional tyre-fitting charges and automatic stock deduction.
Service Management	Digital job cards for General & Specific services, labour charges and inventory consumption during service.
Customer & Vehicle Management	Maintains customer contact details and vehicle history for repeat service.
Billing & Invoicing	Unified billing engine for Sales and Service invoices with optional GST and discount.

Module	Description
Online Track Tyre Orders	Public order form with payment-screenshot upload, admin approval/dispatch workflow, and printable courier-label PDF export.
Reports	Inventory, purchase, sales, service, revenue, profit and stock-movement reports.
User & Role Management	Role-based access for Administrator and Sales Person accounts.

5. Key Functional Highlights

Inventory & Purchases

- Track Tyres are managed without category or brand; Brand New Tyres require both.
- Purchase price and selling price are always stored separately.
- Stock increases automatically on purchase entry and decreases on sales or service usage.

Sales & Fitting

- A single Sales module handles track tyres, brand-new tyres and all other inventory items.
- Optional tyre fitting at ₹300 per wheel, itemized separately from product cost.

Service & Job Cards

- Every service generates a digital Job Card capturing customer, vehicle and odometer details.
- Supports predefined General Service packages as well as Specific (individual) services.
- Inventory consumed during service (oil, brake pads, chains, etc.) is automatically deducted and itemized on the invoice.

Billing & Invoicing

- Sales and Service share a common billing engine with optional GST and discount.
- Labour charges appear only on Service invoices; fitting charges appear only on Sales invoices.

Online Track Tyre Orders

- Customers order via a public link, submitting contact details, address, PIN code, quantity and a payment screenshot.
- Admin verifies payment, approves and dispatches orders; stock reduces only after dispatch.
- Admin can export a single printable PDF of courier labels for multiple selected orders.

6. User Roles & Access

Role	Access
Administrator	Full system access — Dashboard, Inventory, Purchases, Sales, Service, Reports, Online Orders, Settings and User Management.
Sales Person	Restricted access — can create sales invoices, verify and dispatch online orders, and generate courier labels. No access to Inventory, Purchases, Reports, Dashboard analytics or Settings.

7. Reports

The system will provide dedicated reports covering:

- Inventory levels and stock movement
- Purchases
- Sales
- Services
- Revenue and profit (calculated as Sales Amount – Purchase Amount)

8. Key Business Rules

- Purchase Price and Selling Price are always stored separately.
- Track Tyres do not require Category or Brand; Brand New Tyres require both.
- Stock automatically increases after Purchase and decreases after Sales or Service usage.
- Every Sale and every Service generates an invoice; every Service also generates a Job Card.
- GST and Discount are optional on all invoices.
- Fitting Charges apply only to Sales invoices; Labour Charges apply only to Service invoices.
- Online Orders reduce inventory only after the order is dispatched.

9. Deliverables

- A fully functional, responsive web application covering all modules listed in Section 4.
- Role-based login for Administrator and Sales Person users.
- Automated invoice and job-card generation (print/PDF ready).
- Public online order form with admin approval and dispatch workflow.
- Courier label PDF export for online orders.
- Dashboard and reporting suite as described in Sections 5 and 7.
- Basic user documentation for Admin and Sales Person roles.

10. Project Scope Summary

In Scope: Dashboard, Inventory Management, Purchase Management, Sales Management, Service Management, Customer & Vehicle Management, Billing & Invoice Generation, Job Card Management, Online Track Tyre Orders, Courier Label PDF Export, Reports, and User Role Management.

Any requirements outside the modules and rules described in this document — for example third-party accounting integration, SMS/WhatsApp notifications, or multi-branch support — are considered out of scope for this phase and can be discussed as future enhancements.

11. Conclusion

This Garage Management System will give Twinspark Tyres And Bike Garage a single, centralized platform to run day-to-day operations — from inventory and purchases to sales, service and online tyre orders — while giving management clear, real-time visibility into revenue and profit. We look forward to partnering with Twinspark to deliver this solution.
